전기영동(electrophoresis)

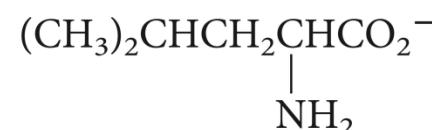

leucine의 경우

(b) at pI

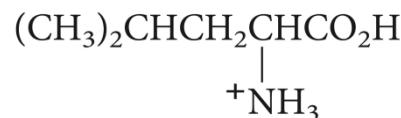

dipolar and neutral

(a) at high pH

negative

(c) at low pH

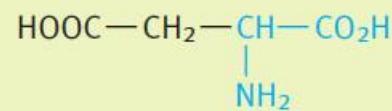

positive

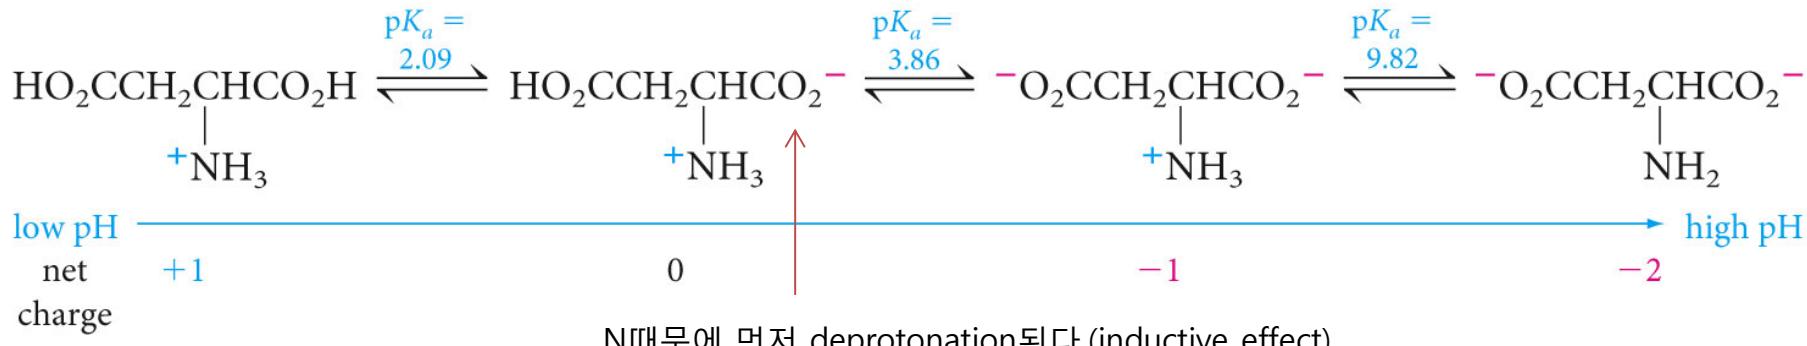

17.3 The Acid-Base Properties of Amino Acids with More Than One Acidic or Basic Group

aspartic acid

Asp (3.0)
D

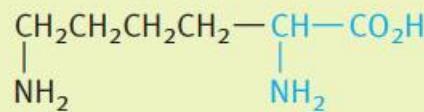

pI는 2.87이다.

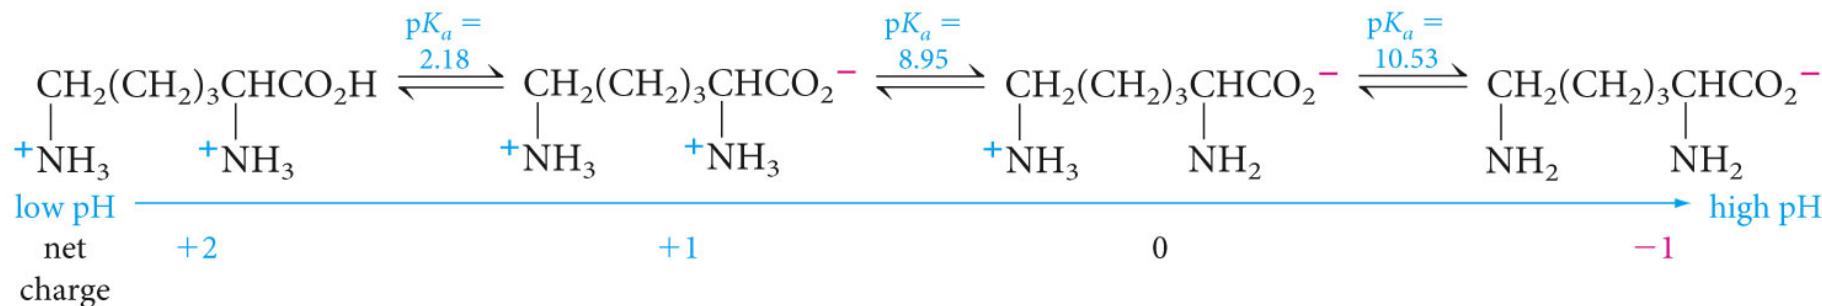

lysine

Lys (9.7)

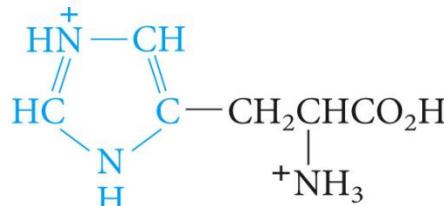

K

pI는 9.74이다.

arginine at pH 1

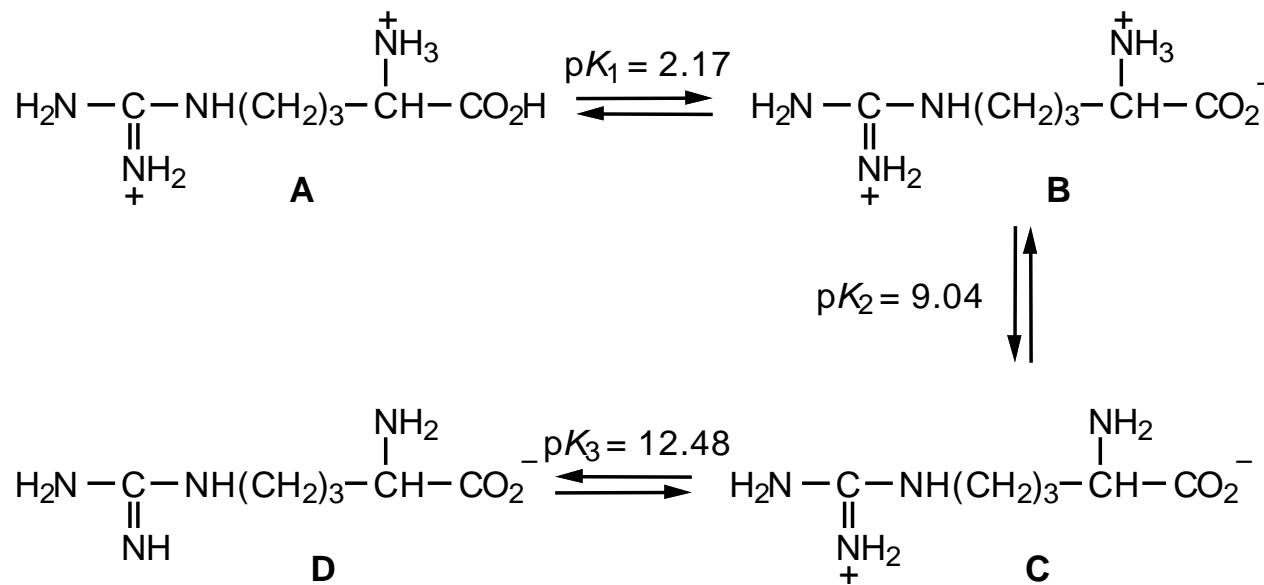

histidine at pH 1

resonance

Problem 6. Arginine shows three pKa's : at 2.17 (the -COOH group), at 9.04 (the N^+H_3 group), and at 12.48 (the guanidinium ion).

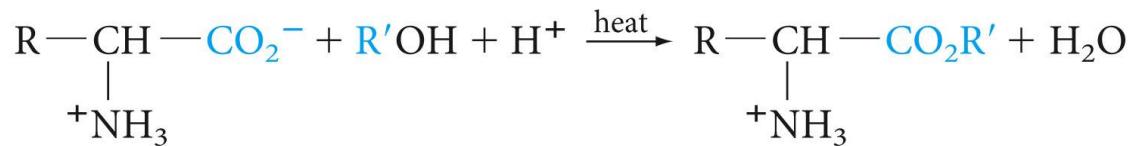

Write equilibria for its dissociation. At approximately what pH will the isoelectric point come, and what is the structure of the dipolar ion?

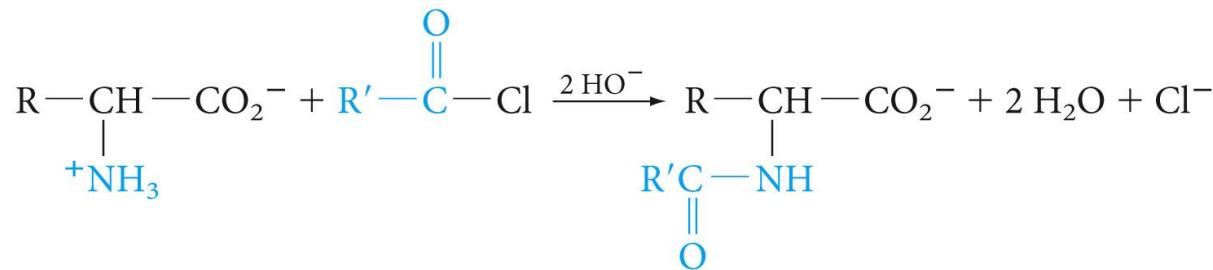

The dipolar ion has structure **C** and the isoelectric point (pI) will be the average of the pK_as of **B** and **D**.

$$pI = [pK_2 + pK_3] / 2 = [9.04 + 12.48] / 2 = 10.76$$

5. Reactions of amino acids

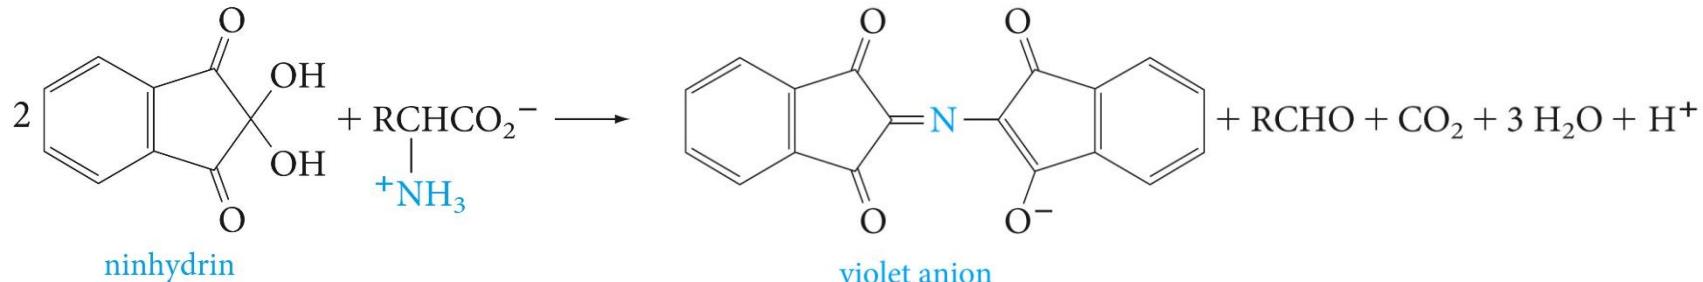

산조건 하에서는 아미노산의 carboxylate가 ester반응으로 ester로 변할 수가 있다.

아미노산의 amino group이 acyl chloride에 의해 acylation 될 수 있다.

6. The Ninhydrin reaction

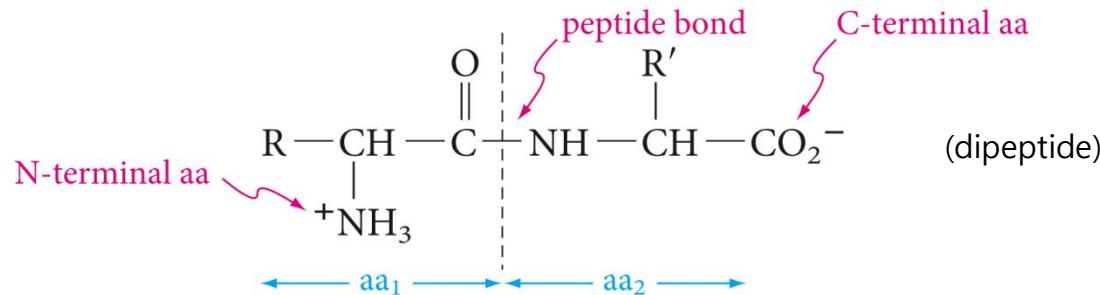

Ninhydrin은 아미노산과 선택적으로 반응을 잘하여 새로운 화합물로 변형이 될 수 있다.

보라색 또는 진한 빨강색의 violet anion으로 쉽게 형성이 된다.

미량의 아미노산을 감지하거나 분석용으로 적합하다.

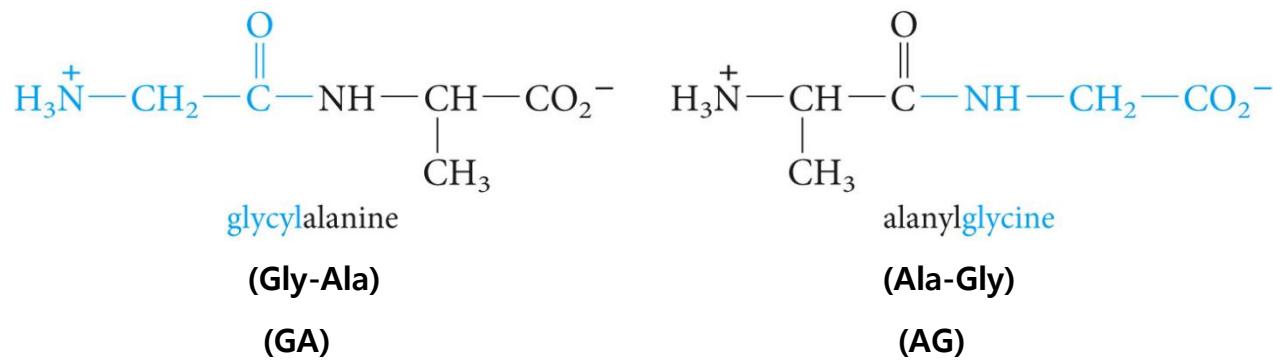

Thin layer chromatography에 발색제로 사용하여 아미노산 뿐만 아니라 amine이 존재하는 화합물들을
발색시켜 분석 가능하다.

7. Peptides

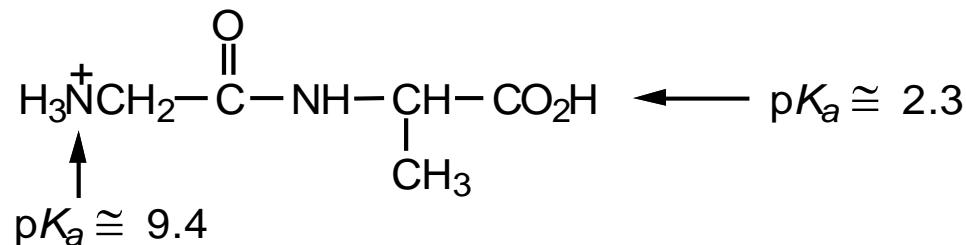

펩타이드와 단백질에서 수많은 아미노산들이 연결되어 있는데, 이때 amide bond (peptide bond)로 이루어져 있다. 전통적으로 N-terminal부터 aa 서열을 읽는다.

Example 5 Alanine가 glycine이 peptide bond로 이루어져 있는 dipeptide structure를 그리시오.

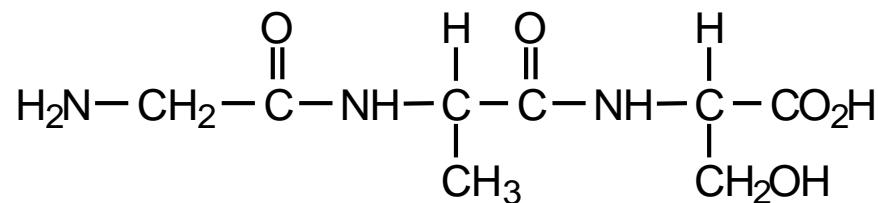

Problem 10. Draw the expected structure of Gly-Ala in solution at pH 3 and at pH 9.

(pI = 6)

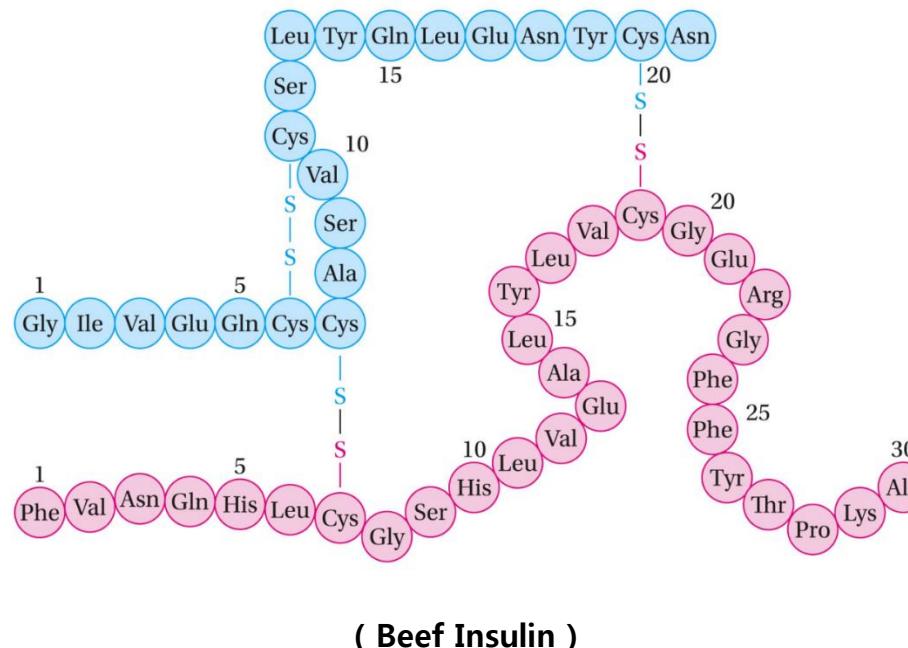

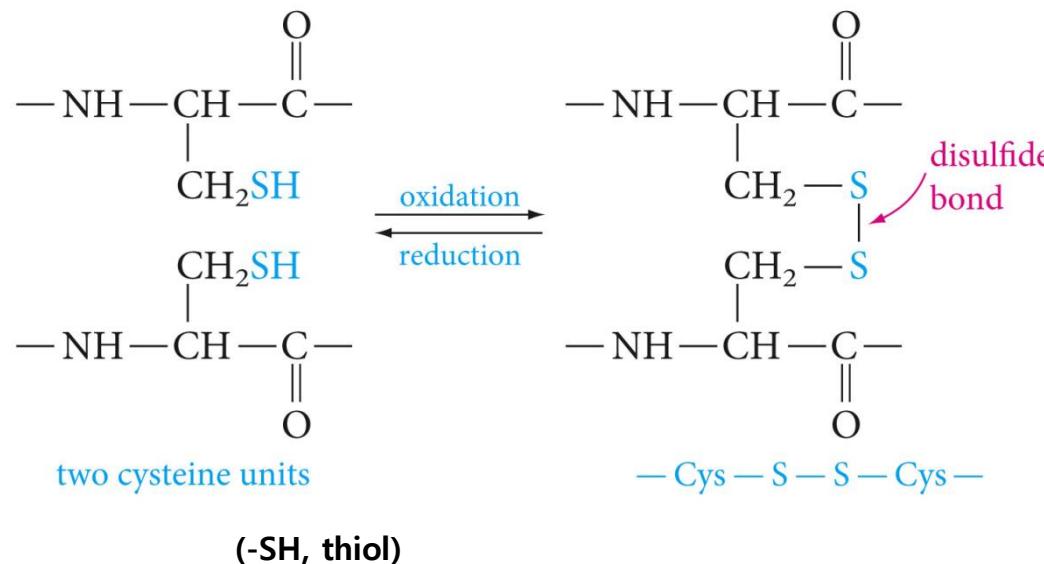

Problem 12. Write out the complete structural formula for Gly-Ala-Ser.

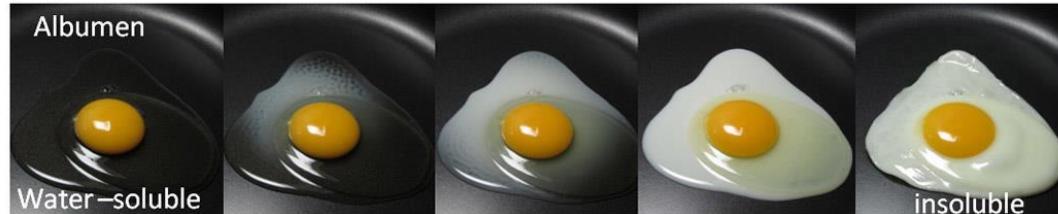

Tripeptide일 경우, 20X20X20의 조합이 가능하다.

8. The Disulfide Bond
